

# Task

You need to build the following UI Designs For Android platform (using Android Studio).

## 1. Home Screen

You need to fetch required data using following APIs and display in UI

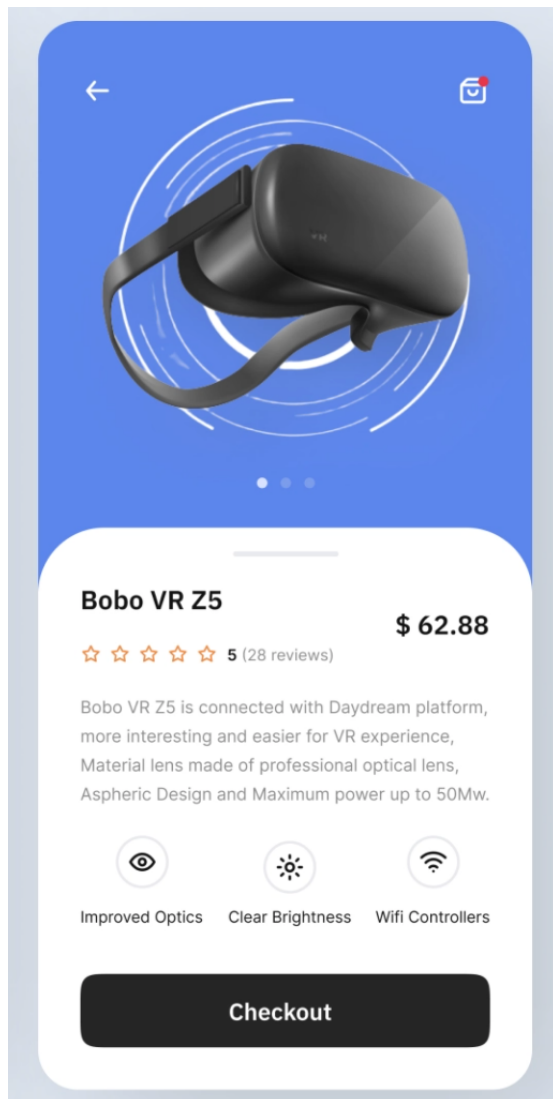

You need to fetch products in All products category using following API

<https://59b8726e92ccc3eb44b0c193eeef96f6.m.pipedream.net/products>

Note

- Product categories should be scrollable
- Products items should be horizontally scrollable
- Once you click on product it should navigate to product details page

## 2. Product details Page

You need to fetch required data using following APIs and display in UI

Fetch Product details using following API

<https://59b8726e92ccc3eb44b0c193eeef96f6.m.pipedream.net/featured>

We expect following factors:

- You need to use kotlin as programming language
- Your code needs to be clean and maintainable
- UI should be scalable

**You need to send us the following outputs**

1. Upload to github repository and send us the link
2. Screenshots / ScreenRecord of the above mentioned UIs
3. APK file (rename apk file as **your\_name\_android\_interview.apk** )

If you are unable to finish on time, it's ok. We would like to review your code. Please send us above mentioned outputs
